version 1.0

Dual Band Wireless AC2600 Managed Access Point

IMPORTANT

To install this Access Point please refer to the **Quick Installation Guide** included in the product packaging.

Chapter 1

Product Overview

Introduction

Key Features

- Up to 27 dBm transmit power enabling long range connectivity
- Supports IEEE802.11ac/a/b/g/n wireless standards with up to 800 Mbps data rate on 2.4GHz band and 1733 Mbps on 5GHz bands
- Support Wave 2 MU-MIMO function on 5GHz radio.
- Support Tx Beamforming to enlarge the transmitting distance.
- Proprietary 48V/802.3at Input design with Ggabits port supports.
- Supply 802.3af power source over the 2nd LAN port (EWS870AP/EWS871AP Only).
- Superior redundant Ethernet interface to assure the non-interruption powering over the 2nd Ethernet port when the 1st Ethernet port is damaged. (EWS370AP/EWS371AP Only)
- Perform 256-QAM under 2.4GHz for enhanceing data rate to 400Mbps
- Robust housing with IP67 enclosure rated to deploy at extremely weather
- Systemic and distributed management over EnGenius ezMaster and EWS Management switch without licensing or subscription fee.
- More customized items on Band Steering for intelligent Management.
- Perform one-click update to deliver a configuration over multi-segments for these managed Access Points.

Introduction

EWS 4x4 managed APs are great performance, evenly coverage and long-range Dual-Band Wireless 802.11ac/a/b/g/n Outdoor Access Point with speeds up to 800 Mbps on 2.4GHz and 1733Mbps on 5GHz bands. It can be configured as an: Managed mode or Stand-alone mode.

Maximum data rates are based on IEEE 802.11 standards. Actual throughput and range may vary depending on many factors including environmental conditions, distance between devices, radio interference in the operating environment, and mix of devices in the network. Features and specifications subject to change without notice. Trademarks and registered trademarks are the property of their respective owners. For United States of America: Copyright © 2016 EnGenius Technologies, Inc. All rights reserved.

These APs are designed to operate in a variety of indoor or outdoor environments. Its high-powered, long-range characteristics make it a cost-effective alternative to ordinary Access Points that don't have the range and reach to connect to a growing number of wireless users who wish to connect to a business network. The AP supports the 2.4GHz frequency band under 802.11 b/g/n mode while at the same time providing 5GHz band under 802.11 ac/a/n mode for communicating to and from 5GHz capable computers, tablets or smart phones or transferring files.

To protect sensitive data during wireless transmissions, the device offers different encryption settings for wireless transmissions, including industry standard WPA and WPA2 encryption. The device also includes MAC address filtering to allow network administrators to offer network access only to known computers and other devices based on their MAC addresses.

System Requirements

The following are the Minimum System Requirements in order to configure the device.

- Computer with an Ethernet interface or wireless network capability
- Windows OS (XP, Vista, 7, 8, 10), Mac OS, or Linux-based operating systems
- Web-Browsing Application (i.e.: Edge, Internet Explorer, Firefox, Safari, or another similar browser application)

Package Contents

*EWS370AP/EWS371AP should contain the following items

- Access Point
- Power Adapter(12V/2A)
- Ceiling Mount Base (9/16" T-Rail)
- Ceiling Mount Base (15/16" T-Rail)
- Mounting Kit
- Quick Installation Guide
- 4 detachable 5 dBi 2.4 GHz Omni-directional Antennas (EWS371AP)
- 4 detachable 5 dBi 5 GHz Omni-directional Antennas (EWS371AP)

*(all items must be in package to issue a refund):

*EWS870AP/EWS871AP should contain the following items

- Access Point
- Power Adapter(48V/1.25A)
- PoE injector
- Ground cable
- Wall Mounting Kit
- Pole Mounting Kit
- Wall Mount Screw Set
- Mounting Screw & Bolts
- Quick Installation Guide
- 2 detachable 5 dBi 2.4 GHz Omni-directional Antennas (EWS871AP)
- 2 detachable 7 dBi 5 GHz Omni-directional Antennas (EWS871AP)

*(all items must be in package to issue a refund):

Technical Specifications

Standard:

IEEE802.11ac/a/n on 5 GHz
IEEE802.11b/g/n on 2.4 GHz

Antenna

Integrated Omni-directional antennas

EWS370AP: 3dBi for 2.4GHz; 3dBi for 5GHz
EWS870AP: 3dBi for 2.4GHz; 3dBi for 5GHz

External Omni-directional antennas

EWS371AP: 2 x 5dBi 2.4GHz Omni directional antennas
2 x 5dBi 5GHz Omni-directional Antennas
EWS871AP: 2 x 5dBi 2.4GHz Omni directional antennas
2 x 7dBi 5GHz Omni-directional Antennas

Physical Interfaces

2 x 10/100/1000 Gigabit Ethernet Port with PoE support

LAN1 Port: 802.3at/Proprietary48V input

LAN2 Port:

* EWS370AP/EWS371AP: Data Transmission

* EWS870AP/EWS871AP: 802.3af PSE output

LED Indicators

Power

LAN 1

LAN 2

2.4 GHz

5 GHz

Power Requirements

802.3at/Proprietary48V input

Support 802.3af PSE output when using included adapter on the EWS870AP/EWS871AP

Operation Modes

Managed Mode

Access Point Mode

Exquisite RF Management

Background Scanning

Auto Transmit Power

Auto Channel Selection

Fast Roaming (802.11K)

Band Steering

RSSI Threshold

ACK timeout (Support on EWS870AP/EWS871AP)

Optimize Performance

Quality of Service (QoS): Follow 802.11e

Power Save Mode (UAPSD)

Pre-Authentication (Compliance with 802.11i&x)

PMK Caching (Compliance with 802.11i)

Fast Roaming (802.11r)

Multicast/Unicast Conversion

Easy to Management

BSSID

Multiple SSIDs

Guest Network

VLAN Tag

VLAN Per SSID

Management VLAN

Captive Portal (Support on Manged mode)

Finger Printing (support on Managed Mode)

Traffic Shaping Per user / Per client

MAC Address Filtering

E-Mail Alert

Save Configuration as Users Default

Wi-Fi Scheduler (Support on Managed mode)

SNMP V1/V2c/V3

MIB I/II, Private MIB

Clients Statistics

RADIUS Accounting

Comprehensive Protection

Wireless encryption standard

Hidden SSID in beacons

Rogue AP Detection (Support on Managed mode)

L2 Isolation

Client Isolation

Https

SSH tunnel

Security

WEP Encryption - 64/128/152 bit

WPA/WPA2 Personal (WPA-PSK using TKIP or AES)

WPA/WPA2 Enterprise (WPA-PSK using TKIP or AES)

Hides SSID in beacons

MAC address Filtering, up to 64 MACs per SSID

Wireless STA (Client) connection list

Https Support

SSH Support

Physical/Environment Conditions

Operating:

Temperature: -20 °C to 70 °C (-4 °F to 158 °F)

Humidity (non-condensing): 90% or less

Storage:

Temperature: -30 °C to 80 °C (-22 °F to 176 °F)

Humidity (non-condensing): 90% or less

Physical Interface (EWS370AP/EWS371AP)

Dimensions and Weights

Length: 215 mm (8.46")

Width: 215 mm (8.46")

Depth: 56 mm (2.2")

Weight: 1.7 Kg (3.7 lbs)

- 1 RP-SMA connectors: Support to install included 3dBi 2.4GHz and 5GHz antennas on EWS371AP only.
- 2 Reset Button: Push this button to reset or reboot this device
- 3 LAN Port 1 (Proprietary 48V-54V/802.3at): Ethernet port for RJ45 cable.
- 4 LAN Port 2 : Ethernet port for RJ45 cable.
- 5 DC-Jack: Power from the included DC12V/2A adapter
- 6 LED Indicators: LED lights for Power, LAN Port 1, LAN Port 2, 2.4 GHz Connection and 5 GHz Connection.

Physical Interface (EWS870AP/EWS871AP)

Dimensions and Weights

Length: 241 mm (8.46")

Width: 209 mm (8.46")

Depth: 60 mm (2.2")

Weight: 2.99 Kg (6.61 lbs)

- 1 N-type connectors: Support to install included 3dBi 2.4GHz and 5GHz antennason EWS871AP only.
- 2 Console/Reset Button: Push this button to reset or reboot this device
- 3 LAN Port 1 (Proprietary 48V-54V/802.3at): Ethernet port for RJ45 cable.
- 4 LAN Port 2 (PSE Output): Ethernet port for RJ45 cable.
- 5 LED Indicators: LED lights for Power, LAN Port 1, LAN Port 2, 2.4 GHz Connection and 5 GHz Connection.

Chapter 2

Before You Begin

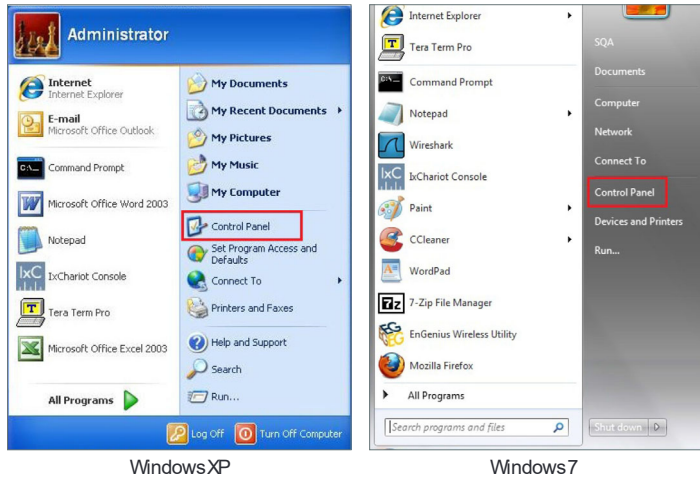

Computer Settings

Windows XP/Windows 7/Windows 8/Windows 10

In order to use the Access Point, you must first configure the TCP/IPV4 connection of your Windows OS computer system.

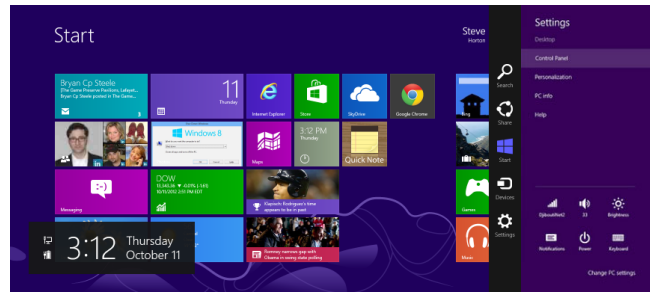

1a. Click the Start button and open the Control Panel

WindowsXP

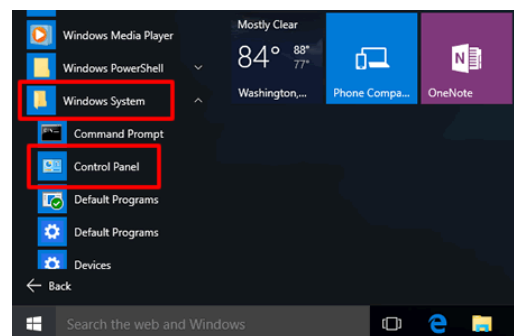

Windows 7

1b. Move your mouse to the lower right hot corner to display the Charms Bar and select the **Control Panel** in **Windows 8 OS**.

Windows8

1c. In Windows 10, click Start to select **All APPs** to enter the folder of **Windows system** for selecting **Control Panel**.

Windows 10

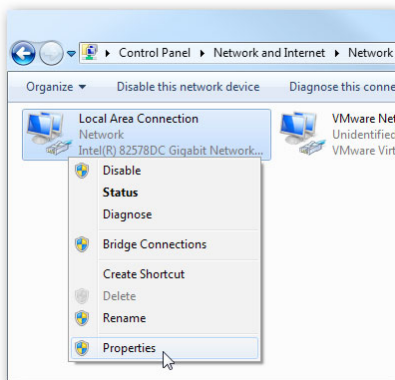

2a. In Windows XP, click **Network Connections**.

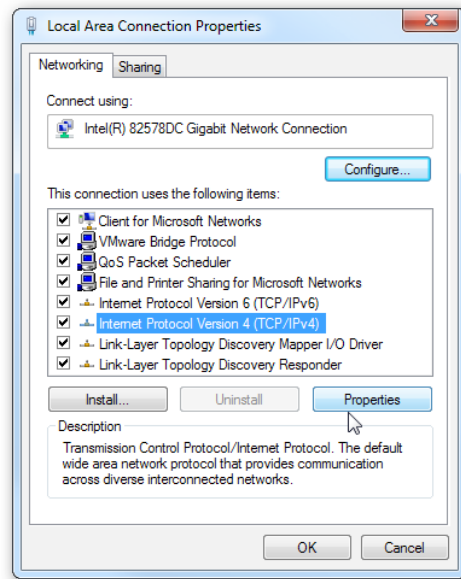

2b. In Windows 7/Windows 8/Windows 10, click **View Network Status and Tasks** in the **Network and Internet** section, then select **Change adapter settings**.

3. Right click on **Local Area Connection** and select **Properties**.

4. Select **Internet Protocol Version 4 (TCP/IPv4)** and then select **Properties**.

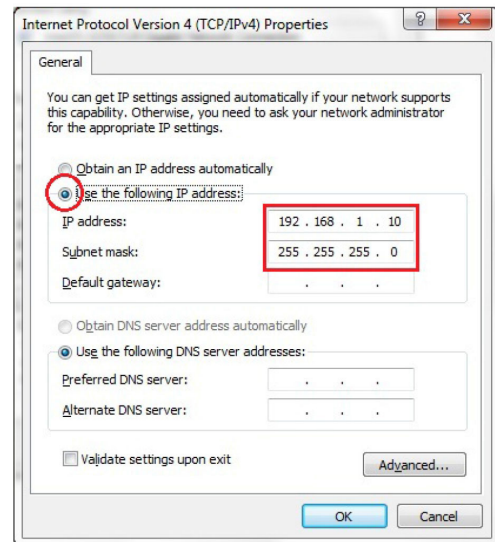

5. Select **Use the following IP address** and enter an IP address that is different from the Access Point and Subnet mask, then click **OK**.

Note: Ensure that the IP address and Subnet mask are on the same subnet as the device.

For example: ENH220EXT IP address: 192.168.1.1

PCIPaddress:192.168.1.2–192.168.1.255

PCSubnet mask: 255.255.255.0

Apple Mac OS X

1. Go to System Preferences (which can be opened in the Applications folder or selecting it in the Apple Menu).
2. Select **Network** in the **Internet & Network** section.

3. Highlight **Ethernet**.

4. In **Configure IPv4**, select **Manually**.

5. Enter an IP address that is different from the Access Point and Subnet mask then press **OK**.

Note: Ensure that the IP address and Subnet mask are on the same subnet as the device.

For example: AP IP address: 192.168.1.1

PCIPaddress: 192.168.1.2–192.168.1.255

PCSubnet mask: 255.255.255.0

6. Click **Apply** when done.

Hardware Installation

(EWS370AP/EWS371AP)

1. Connect one end of the Ethernet cable into the LAN port of the Access Point and the other end to the Ethernet port on the computer.
2. Connect the Power Adapter to the DC-IN port of the Access Point and plug the other end into an electrical outlet.
3. Screw on the provided antennas to the top of this device.
(EWS371AP only)

This diagram depicts the hardware configuration.

Note: The Access Point supports both IEEE 802.3at PoE (Power over Ethernet) or the included power adapter. You may use either one as the power source. **DO NOT use both at the same time.**

Hardware Installation

(EWS870AP/EWS871AP)

1. Connect one end of the Ethernet cable into the 1st LAN(PoE) port of the AP and the other end to the AP Ethernet port on the PoE injector.
2. Connect the Power Adapter to the DC-IN port of the PoE injector and plug the other end into an electrical outlet.
3. Connect the second Ethernet cable into the LAN port of the PoE injector and the other end to the Ethernet port on the computer.
4. Place the pane removed from step A back into the device.
6. Screw on the provided antennas to the top of this device.
(EWS871AP only)

This diagram depicts the hardware configuration.

Note: This Access Point supports both 802.3at PoE (Power over Ethernet) or the included injector and adapter. You may use either one as the power source. **Do not use both at the same time.**

Mounting the AP (EWS370AP/EWS371AP)

Using the provided hardware, the AP can be attached to a wall or a ceiling.

1. Managed Indoor Access Point

2. Power Adapter

3. RJ45 Ethernet Cable

4. Ceiling Mount Base (9/16" T-Rail)

5. Ceiling Mount Base (15/16" T-Rail)

6. Mounting Screw Kit

7. 2.4GHz Detachable

Antenna x 4 (EWS371AP only)

8. 5GHz Detachable

Antenna x 4 (EWS371AP only)

To attach the AP on a ceiling

1. Slide the ceiling mount base into the slot of the Access Point.
2. Hold the Access Point with one hand to reach the other hand over the T-Rail sides of the bracket. Then hook the stationary end of the ceiling mount bracket onto the T-Rail.

To attach the AP on a wall

1. Determine where the Access Point to be placed and mark location on the surface for the two mounting holes. Use the appropriate drill bit to drill two 8.1mm diameter and 26mm depth holes in the markings and hammer the bolts into the openings.
2. Screw the anchors into the holes until they are flush with the wall.
3. Screw the included screws into the anchors.

Mounting the AP (EWS870AP/EWS871AP)

Using the provided hardware, the AP can be attached to a wall or a pole.

1. Managed Outdoor Access Point

2. PoE Injector

3. PoE Injector

4. Ground cable

5. Wall Mounting Kit

6. Pole Mounting Kit

7. Quick Installation Guide

8. Mounting Screws & Bolts

8. 2.4GHz&5GHz Detachable Antennas

To attach this AP on a wall

1. Mark the four locations of the mounting holes on the  mounting surface..
2. Drill a 37mm deep 8mm hole in the markings and hammer the bolts into the openings.
3. Place the lock and  washer on the four hex cap screws and drive these screws to attach bracket of this Access Point.
4. Attach this device onto the wall by tightening the bolt's  washers and nuts to secure the mounting base to the mounting surface

1

2

3

4

To attach this AP on a pole

1. Drive the four round head screws to attached the pole mount bracket to the wall mount bracket.
2. Thread the open end of the pole straps through these two tabs on the pole mount bracket.
3. Lock and tighten pole strap to secure this pole mount bracket to the pole.

Chapter 3

Configuring Your Access Point

Configuring Your Access Point

This section will show you how to configure the device using the web-based configuration interface.

Default Settings

Please use your Ethernet port or wireless network adapter to connect the Access Point.

IP Address	192.168.1.1
Username / Password	admin / admin

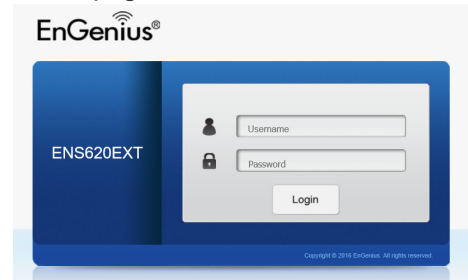

Web Configuration

1. Open a web browser (Internet Explorer/Firefox/Safari/Chrome) and enter the IP Address `http://192.168.1.1`

Note: If you have changed the default LAN IP Address of the Access Point, ensure you enter the correct IP Address.

2. The default username and password are **admin**. Once you have entered the correct username and password, click the **Login** button to open the web-based configuration page.

* The model will be varied by different models.

3. If successful, you will be logged in and see the User Menu of this Access Point.

Chapter 4

Building a Wireless

Network

Access Point Mode

In Access Point Mode, AP behaves like a central connection for stations or clients that support IEEE 802.11 ac/a/b/g/n networks. The stations and clients must be configured to use the same SSID (Service Set Identifier) and security password to associate with the AP. The AP supports up to eight SSIDs per band at the same time for secure access.

Chapter 5

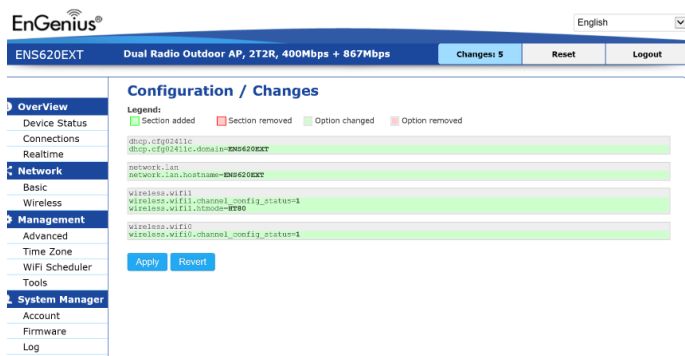

Status

Overview

Save Changes

This page lets you save and apply the settings shown under **Unsaved changes list**, or Revert the unsaved changes and revert to the previous settings that were in effect.

Device Status

Clicking the Device Status link under the **Overview** menu shows the status information about the current operating mode.

- The **Device Information** section shows general system information such as Device Name, MAC Address, Current Time, Firmware Version, and Management VLAN ID

Note: VLAN ID is only applicable in Access Point, WDS AP or WDS BR mode.

Device Information

Device Name	ENS620EXT
MAC Address	
- LAN1	88:DC:96:00:00:10
- LAN2	88:DC:96:00:00:11
- Wireless LAN - 2.4GHz	88:DC:96:00:00:12
- Wireless LAN - 5GHz	88:DC:96:00:00:13
Country	USA
Current Local Time	Tue Jul 12 11:45:00 2016
Uptime	0h 4m 57s
Firmware Version	1.0.0
Management VLAN ID	Untagged

- The **Memory Information** section shows usage of memory such as Total Available, Free, Cached, Buffered

Memory Information

Total Available	128884 kB / 236336 kB (54%)
Free	95352 kB / 236336 kB (40%)
Cached	24908 kB / 236336 kB (10%)
Buffered	8624 kB / 236336 kB (3%)

- The **LAN Information** section shows the Local Area Network settings such as the LAN IP Address, Subnet mask, Primary DNS Address, Secondary DNS Address, status of DHCP client, and status of Spanning Tree protocol (STP).

LAN Information - IPv4

IP Address	192.168.1.1
Subnet Mask	255.255.255.0
Gateway	192.168.1.1
Primary DNS	0.0.0.0
Secondary DNS	0.0.0.0
DHCP Client	Disable
Spanning Tree Protocol(STP)	Disable

The Wireless LAN Information 2.4 GHz/5 GHz section shows wireless information such as Operation Mode, Frequency, and Channel. Since this Access Point supports multiple-SSIDs, information about each SSID, the ESSID, and security settings, are displayed

Note: Profile Settings are only applicable in Access Point and WDS AP modes.

Wireless LAN Information - 2.4GHz

Operation Mode	Access Point			
Wireless Mode	802.11 B/G/N			
Channel Bandwidth	20 MHz			
Channel	2.412 GHz(Channel 1)			
Profile	SSID	Security	VID	802.1Q
#1	EnGenius_Test	None	1	Disable
#2	EnGenius-mac-_2-2.4GHz	None	2	Disable
#3	EnGenius-mac-_3-2.4GHz	None	3	Disable
#4	EnGenius-mac-_4-2.4GHz	None	4	Disable
#5	EnGenius-mac-_5-2.4GHz	None	5	Disable
#6	EnGenius-mac-_6-2.4GHz	None	6	Disable
#7	EnGenius-mac-_7-2.4GHz	None	7	Disable
#8	EnGenius-mac-_8-2.4GHz	None	8	Disable
#9	EnGenius-2.4GHz_GuestNetwork	None		Disable

Wireless LAN Information - 5GHz

Operation Mode	WDS Access Point			
Wireless Mode	802.11 N/AC			
Channel Bandwidth	80 MHz			
Channel	5.180 GHz(Channel 36)			
Profile	SSID	Security	VID	802.1Q
#1	EnGenius_Test	None	51	Disable
#2	EnGenius-mac-_2-5GHz	None	52	Disable
#3	EnGenius-mac-_3-5GHz	None	53	Disable
#4	EnGenius-mac-_4-5GHz	None	54	Disable

- The **Statistics** section shows Mac information such as SSID, MAC address, RX and TX.

Statistics

SSID	MAC	RX(Packets)	TX(Packets)
Ethernet	88:DC:96:00:00:10	134.37 KB(829 Pkts.)	893.75 KB(857 Pkts.)
EnGenius-mac-_1-2.4GHz	88:DC:96:00:00:12	0.00 B(0 Pkts.)	21.34 KB(149 Pkts.)
EnGenius-mac-_1-5GHz	88:DC:96:00:00:13	0.00 B(0 Pkts.)	8.02 KB(44 Pkts.)

Connections

2.4 GHz/5 GHz Connection List

Click the connection link under the Overview menu displays the connection list of clients associated to the AP's 2.4 GHz/5 GHz, along with the MAC addresses and signal strength for each client. Clicking **Refresh** updates the client list.

Note: Only applicable in Access Point and WDS AP modes.

2.4 GHz/5 GHz WDS Link List

Click the connection link under the Overview menu. This page displays the current status of the WDS link, including WDS Link ID, MAC Address, Link Status and RSSI.

Note: Only applicable in WDSAP and WDS Bridge modes.

Connection List - 2.4GHz

SSID	MAC Address	TX	RX	RSSI	Block
------	-------------	----	----	------	-------

WDS Link List - 5GHz

WDS Link ID#	MAC Address	Link Status	RSSI(dBm)
--------------	-------------	-------------	-----------

Refresh

Realtime

Realtime

The Realtime section contains the following options:

CPU Loading: 3 minutes CPU loading percentage information, it displays current loading, average loading and peak loading status. Left bar is loading percentage; button is time tracing. Interval is every 3 seconds

Traffic Loading: 2.4GHz and 5GHz and Ethernet port inbound and outbound traffic by current, average and peak time.

Realtime Connection (Pkts): Overview on current active network connections. It displays UDP and TCP packets information and other connection status. UDP connections curve is in blue; TCP connection curve is in green; others curve is in red. Below of chart shows connections source and destination.

Chapter 6

Network

Basic

IPv4/IPv6 Settings

This page allows you to modify the device's IP settings.

IPv4 Settings	
IP Network Setting	<input type="radio"/> DHCP <input checked="" type="radio"/> Static IP
IP Address	<input type="text" value="192.168.1.1"/>
Subnet Mask	<input type="text" value="255.255.255.0"/>
Gateway	<input type="text" value="192.168.1.1"/>
Primary DNS	<input type="text" value="0.0.0.0"/>
Secondary DNS	<input type="text" value="0.0.0.0"/>

IPv6 Settings	
	<input checked="" type="checkbox"/> Link-local Address
IP Address	<input type="text"/>
Subnet Prefix Length	<input type="text"/>
Gateway	<input type="text"/>
Primary DNS	<input type="text"/>
Secondary DNS	<input type="text"/>

IP Network Settings: Select whether the device IP address will use a static IP address specified in the IP address field or be obtained automatically when the device connects to a DHCP server.

IP Address: The IP address of this device.

Subnet Mask: The IP Subnet mask of this device.

Gateway: The Default Gateway of this device. Leave it blank if you are unsure of this setting.

Primary/Secondary DNS: The primary/secondary DNS address for this device.

Save: Click Save to confirm the changes.

Spanning Tree Protocol (STP) Settings

This page allows you to modify the Spanning Tree settings. Enabling the Spanning Tree protocol will prevent network loops in your LAN network.

Spanning Tree Protocol (STP) Settings		
Status	<input type="radio"/> Enable <input checked="" type="radio"/> Disable	
Hello Time	<input type="text" value="2"/>	seconds (1-10)
Max Age	<input type="text" value="20"/>	seconds (6-40)
Forward Delay	<input type="text" value="15"/>	seconds (4-30)
Priority	<input type="text" value="32768"/>	(0-65535)

Spanning Tree Status: Enables or Disables the Spanning Tree function. Default is Disable.

Hello Time: Specifies Bridge Hello Time in seconds. This value determines how often the device sends handshake packets to communicate information about the topology throughout the entire Bridged Local Area Network.

Max Age: Specifies Bridge Max Age in seconds. If another

bridge in the spanning tree does not send a hello packet for a long period of time, it is assumed to be inactive.

Forward Delay: Specifies Bridge Forward Delay in seconds. Forwarding delay time is the time spent in each of the Listening and Learning states before the Forwarding state is entered. This delay is provided so that when a new bridge comes onto a busy network, it analyzes data traffic before participating in the network.

Priority: Specifies the Priority Number. A smaller number has a greater priority than a larger number.

Save: Click Save to confirm the changes.

Chapter 7

2.4 GHz & 5 GHz Wireless

Wireless

Wireless Settings

Wireless Settings	
Device Name	ENS620EXT
Country / Region	USA
Band Steering	Disabled NOTE: In order for Band Steering function to work properly, both 2.4GHz and 5GHz SSID and Security Settings must be the same.

Device Name: Enter a name for the device. The name you type appears in SNMP management. This name is not the SSID and is not broadcast to other devices.

Band Steering: Enable Band Steering to send 802.11n clients to the 5 GHz band, where 802.11b/g clients cannot go, and leave 802.11b/g clients in 2.4GHz to operate at their slower rates. Before implementing this feature, we suggest you to assure the both 2.4GHz and 5GHz SSID, as well as security settings must be the same. EnGenius Band Steering supports following advanced settings,

Wireless Settings	
Device Name	ENS620EXT
Country / Region	USA
Band Steering	Force 5GHz INFORMATION: When band steering is configured to Force 5GHz mode, the AP will not allow a dual band client to connect to the 2.4GHz band only if the client is not currently associated on the 2.4GHz radio of this AP. NOTE: In order for Band Steering function to work properly, both 2.4GHz and 5GHz SSID and Security Settings must be the same.

***Force 5GHz:** When band steering is configured to Force 5GHz mode, the AP will not dual band capable client devices to network to the 2.4GHz band only if the client

devices are not currently associated on 2.4GHz radio in this AP.

Wireless Settings	
Band Steering	Prefer 5GHz 5GHz RSSI: -75 dBm NOTE: In order for Band Steering function to work properly, both 2.4GHz and 5GHz SSID and Security Settings must be the same.

***Prefer 5GHz:** When band steering is configured to Prefer 5GHz mode, the AP will steer dual band capable client devices to 5GHz radio when the RSSI value of these client devices on 5GHz radio is more than set one. The allowed RSSI value for default setting is -75dBm.

Wireless Settings	
Band Steering	Band Balance 5GHz RSSI: -75 dBm Percent of clients on 5GHz radio: 75 % NOTE: In order for Band Steering function to work properly, both 2.4GHz and 5GHz SSID and Security Settings must be the same.

***Band Balance:** When band steering is configured to Band Balance mode, the AP will steer dual band capable client devices to 5GHz when the RSSI value of these client devices on 5GHz radio is more than set one. To evenly allocate RF resource on the both 2.4GHz and 5GHz radios, users also can set the portion of client devices on 5GHz radio to assure smoothly connection. The default value of the 5GHz radio is 75%.

Save: Click Save to confirm the changes.

This page displays the current status of the Wireless settings of this AP.

2.4 GHz/5 GHz Wireless Network

	2.4GHz	5GHz
Operation Mode	Access Point <input checked="" type="checkbox"/> Green	Access Point <input checked="" type="checkbox"/> Green

Operation Mode: EWS 4x4 devices support Access Point currently.

Wireless Mode: Scrow down this list to select wireless broadcasting standard on 2.4GHz and 5GHz frequency bands.

Channel HT Mode: Scrow down this list to select bandwidth for operating under a frequency band. The default channel bandwidth is 20 MHz on 2.4GHz frequency radio and 40 MHz on 5GHz frequency radio. Considering the different

applications, users can decide to implement a channel bandwidth to full real applications. The larger the channel, the greater the transmission quality and speed.

Transmit Power (Tx Power): Default Tx power is Auto to obey regularatory power of each country.

Channel: Click Configuration button to open a new windows to configure channels for performing wireless service.

[Save](#) Save current setting(s)

*Default configuration: Default setting of channel selection is "All" to perform auto channel on the exist channel list.

***None:** Click “None” to disable the setting on this radio. This radio is disabled.

***Group Configuration:** Click specific groups of channels for performing auto channel function. For example, users can click U-NII-1 and U-NII-3 to perform auto channel on these bands; the mechanism of this AP will select the relatively optimal channel to perform wireless service.

Data Rate: Select a data rate from the drop-down list. The data rate affects throughput of data in the AP. Select the best balance for you and your network but note that the lower the data rate, the lower the throughput, though transmission distance is also lowered.

RTS/CTS Threshold: Specifies the threshold package size for RTS/CTS. A small number causes RTS/CTS packets to be sent more often and consumes more bandwidth.

Client Limits: Limits the total number of clients on this radio. Once setting the ceiling of client numbers, the maximum associated client devices will be restricted at this number.

Aggregation: Integrate multiple data packets into one packet to deliver to client devices. This option reduces the

number of packets, but also increases packet sizes.

AP Detection: AP Detection can select the best channel to use by scanning nearby areas for Access Points.

Distance: Specifies the distance between Access Points and client devices. The proper setting for this parameter may assist Access Points to avoid the improper operation when transmitting data under a real application.

* **The Distance setting should be supported on the outdoor Access Point including EWS870AP and EWS871AP.**

Save: Click Save to confirm the changes or **Cancel** to cancel and return to previous settings.

Current Profile: You can configure up to sixteen (16) different SSIDs (eight (8) per band). If multiple client devices will be accessing the network, you can arrange the devices into SSID groups. Click **Edit** to configure the profile and check whether you want to enable extra SSID.

SSID: Specifies the SSID for the current profile.

Suppressed SSID: Check this option to hide the SSID from clients. If checked, the SSID will not appear in the site survey.

Station Separation: Click the appropriate radio button to allow or prevent communication between client devices.

VID: Specifies the VLAN tag for each profile. If your network includes VLANs, you can specify a VLAN ID for packets pass through the Access Point with a tag.

Wireless Security: See the Wireless Security section.

Isolation: Restrict clients communicating with different VLANs by selecting the radio button.

Save: Click Save to accept the changes.

Wireless Security

The Wireless Security section lets you configure the AP's security modes

Wireless Security - 2.4GHz

Security Mode	WEP
Auth Type	Open System
Input Type	Hex
Key Length	40/64-bit (10 hex digits or 5 A
Default Key	Key #1
Key #1	<input type="text"/>
Key #2	<input type="text"/>
Key #3	<input type="text"/>
Key #4	<input type="text"/>

Security Mode: Including WEP, WPA-PSK, WPA2-PSK, WPA-PSK Mixed, WPA, WPA2, and WPA Mixed. We strongly recommend you to use WPA2-PSK mode.

* Setting of WEP mode:

Auth Type: Select Open System or Shared Key.

Input Type:

- ASCII: Regular Text (recommended)
- Hexadecimal Numbers (For advanced users)

Key Length: Select the desired option and ensure that wireless clients use the same setting. Your choices are 64, 128, and 152-bit password lengths.

Default Key: Select the Key you wish to be the default. Transmitted data is ALWAYS encrypted using the Default Key; the other Keys are for decryption only. You must enter a Key Value for the Default Key.

Encryption Key Number: Enter the Key Value or values you wish to use. Only the Key selected as Default is required. The others are optional.

Wireless Security - 5GHz	
Security Mode	WPA-PSK ▼
Encryption	AES ▼
Passphrase	<input type="text"/>
Group Key Update Interval	3600

* Setting of WPA-PSK, WPA2-PSK and WPA-PSK Mixed (Pre-Shared Key):

Encryption: You may select AES, TKIP or Both (TKIP+AES) to be the encryption type you would like. Please ensure that your wireless clients use the same settings.

Passphrase: Wireless clients must use the same Key to associate the device. If using ASCII format, the Key must be from 8 to 63 characters in length. If using HEX format, the Key must be 64 HEX characters in length.

Group Key Update Interval: Specifies how often, in seconds, the Group Key changes. The default value is 3600.

Wireless Security - 5GHz	
Security Mode	WPA-Enterprise ▼
Encryption	AES ▼
Group Key Update Interval	3600
Radius Server	<input type="text"/>
Radius Port	1812 Default 1812
Radius Secret	<input type="text"/>
Radius Accounting	Disable ▼
Radius Accounting Server	<input type="text"/>
Radius Accounting Port	1813
Radius Accounting Secret	<input type="text"/>
Interim Accounting Interval	600

* Setting of WPA-Enterprise & WPA2-Enterprise (Pre-Shared Key):

Encryption: Select the WPA encryption type you would like. Please ensure that your wireless clients use the same settings.

Radius Server: Enter the IP address of the Radius server.

Radius Port: Enter the port number used for connections to the Radius server.

Radius Secret: Enter the secret required to connect to the Radius server.

Radius Accounting: Enable or disable accounting feature.

Radius Accounting Server: Enter the IP address of the Radius accounting server.

Radius Accounting Port Enter the port number used for connections to the Radius accounting server.

Radius Accounting Secret: Enter the secret required to connect to the Radius accounting server.

Interim Accounting Interval: Specifies how often, in seconds, the accounting data sends.

Note: 802.11n does not allow WEP/WPA-PSK TKIP/WPA2-PSK TKIP security mode. The connection mode will automatically change from 802.11n to 802.11g.

Wireless MAC Filtering

Wireless MAC Filtering is used to allow or deny network access to wireless clients (computers, tablet PCs, NAS, smartphones, etc.) according to their MAC addresses. You can manually add a MAC address to restrict permission to access this AP. The default setting is: **Disable Wireless MAC Filter**.

Note: Only applicable in Access Point and WDS AP modes.

Wireless MAC Filter

ACL Mode: Disabled

No.	MAC Address
	<input type="text"/> : <input type="text"/> : <input type="text"/> : <input type="text"/> : <input type="text"/> : <input type="text"/> <input type="button" value="Add"/>

ACL Mode: Determines whether network access is granted or denied to clients whose MAC addresses appear in the MACaddress table on this page. Your choices are: Disabled, Deny MAC in the list, or Allow MAC in the list.

MACAddress: Enter the MAC address of the wireless client.

Add: Click **Add** to add the MAC address to the MAC address table.

Delete: Delete the selected entries.

Save: Click **Save** to apply the changes.

Wireless Advanced

Wireless Traffic Shaping

Traffic shaping regulates the flow of packets leaving an interface to deliver improved Quality of Service.

Wireless Traffic Shaping	
Enable Traffic Shaping	<input type="radio"/> Enable <input checked="" type="radio"/> Disable
Download Limit	<input type="text" value="100"/> <input type="checkbox"/> Per User Mbps (1-999)
Upload Limit	<input type="text" value="100"/> <input type="checkbox"/> Per User Mbps (1-999)

Enable Traffic Shaping: Default is disable. You may check this option to enable Wireless Traffic Shaping per SSID.

Download Limit: Specifies the wireless transmission speed used for downloading.

Upload Limit: Specifies the wireless transmission speed used for uploading.

Per User: Check this option to enable wireless traffic shaping per user function. This function allow users to limit the maximum download / upload bandwidth for each client devices on this SSID.

Save: Click Save to confirm the changes.

Fast Roaming

Enable the function to serve mobile client devices that roam from Access Point to Access Point. Some applications running on Client devices require fast re-association when they roam to a different Access Point

Please enter the settings of the SSID and initialize the Security mode to WPA enterprise, as well as to set the Radius Server properly. Users can enable the Fast Roaming and implement the advanced search.

Please also set the same enterprise Encryption under the same SSID on other Access Points and enable the Fast Roaming. When the configuration is realized on different Access Point, the mobile client devices can run the voice service and require seamless roaming to prevent delay in conversation from Access Point to Access Point.

Fast Roaming	
Enable Fast Roaming	<input type="radio"/> Enable <input checked="" type="radio"/> Disable

Guest Network Settings

Adding a guest network allows visitors to use the Internet without giving out your office or company wireless security key. You can add a guest network to each wireless network in the 2.4 GHz b/g/n and 5 GHz ac/a/n frequencies.

Guest Network Settings					
Enable	SSID	Edit	Security	Suppressed SSID	Station Separation
<input type="checkbox"/>	EnGenius-2.4GHz_GuestNet	Edit	None	<input type="checkbox"/>	<input checked="" type="checkbox"/>
<input type="checkbox"/>	EnGenius-5GHz_GuestNetw	Edit	None	<input type="checkbox"/>	<input checked="" type="checkbox"/>
Manual IP Settings					
- IP Address	192.168.200.1				
- Subnet Mask	255.255.255.0				
Automatic DHCP Server Settings					
- Starting IP Address	192.168.200.100				
- Ending IP Address	192.168.200.200				
- WINS Server IP	0.0.0.0				

SSID: Specifies the SSID for the current profile.

Suppressed SSID: Check this option to hide the SSID from clients. If checked, the SSID will not appear in the site survey.

Station Separation: Click the appropriate radio button to allow or prevent communication between client devices.

IP Address: The IP Address of this device.

Subnet Mask: The IP Subnet mask of this device.

Starting IP Address: The first IP Address in the range of

the addresses by the DHCP server.

Ending IP Address: The last IP Address in the range of addresses assigned by the DHCP server.

RSSI Threshold (AP mode Only)

RSSI Threshold	2.4GHz	5GHz
Status	<input type="radio"/> Enable <input checked="" type="radio"/> Disable	<input type="radio"/> Enable <input checked="" type="radio"/> Disable
RSSI	<input type="text" value="-85"/> dBm (Range: -60dBm ~ -100dBm)	<input type="text" value="-90"/> dBm (Range: -60dBm ~ -100dBm)

RSSI Threshold: Enable the RSSI Threshold feature by ensuring that each client is served by at least one Access Point at any time. Access Points continuously monitor the connectivity quality of any client in their range and efficiently share this information with other Access Points in the vicinity of that client to coordinate which of them should serve the client best.

RSSI: Enter the RSSI (Received Signal Strength Index) in order to determine the handover procedure which the current wireless link will terminate. RSSI is an indication of the power level being received by the antenna. Therefore, the higher the RSSI number, the stronger the signal.

Chapter 8

Management

Management VLAN Settings

This page allows you to assign a VLAN tag to packets sent over the network. A VLAN is a group of computers on a network whose software has been configured so that they behave as if they were on a separate Local Area Network (LAN). Computers on VLAN do not have to be physically located next to one another on the LAN.

Note: Only applicable in Access Point.

Management VLAN: If your network includes VLANs, you can enable **Management VLAN ID** for packets passing through the Access Point with a tag.

Save: Click **Save** to confirm the changes or **Cancel** to cancel and return to previous settings.

Note: If you reconfigure the Management VLAN ID, you may lose your connection to this AP. Verify that the

DHCP server supports the reconfigured VLAN ID and then reconnect to this AP using the new IP address.

Advanced Settings

SNMP Settings

This page allows you to assign the Contact Details, Location, Community Name, and Trap Settings for a Simple Network Management Protocol (SNMP). SNMP is a networking management protocol used to monitor network attached devices. SNMP allows messages (called protocol data units) to be sent to various parts of the network. Upon receiving these messages, SNMP compatible devices (called agents) returns the data stored in their Management Information Bases.

SNMP Settings	
Status	<input checked="" type="radio"/> Enable <input type="radio"/> Disable
Contact	<input type="text"/>
Location	<input type="text"/>
Community Name (Read Only)	public
Community Name (Read Write)	private
Trap Destination

- Authorized Key	12345678 (8-32 Characters)
- Private Protocol	DES
- Private Key	12345678 (8-32 Characters)
- Engine ID	<input type="text"/>

SNMP Enable/Disable: Enables or disables the SNMP feature.

Contact: Specifies the contact details of the device.

Location: Specifies the location of the device.

Community Name (Read Only): Specifies the password for the SNMP community for read only access.

Community Name (Read/Write): Specifies the password for the SNMP community with read/write access.

Trap Destination Address: Specifies the IP address of the computer that will receive the SNMP traps.

Trap Destination Community Name: Specifies the password for the SNMP trap community.

SNMPv3: Enables or disables the SNMPv3 feature.

User Name: Specifies the username for SNMPv3.

Auth Protocol: Selects the authentication protocol type: MDS or SHA.

Auth Key: Specifies the authentication key.

Priv Protocol: Selects the privacy protocol type: DES.

Priv Key: Specifies the privacy key for privacy.

Engine ID: Specifies the engine ID for SNMPv3.

Apply Save: Click Apply Save to apply the changes.

CLI Settings

CLI Setting

Status Enable Disable

SSH Setting

Status Enable Disable

HTTPS Settings

Status Enable Disable

HTTPS forward Enable Disable

CLI: The Command Line Interface (CLI) allows you to type commands instead of choosing them from a menu or selecting an icon.

SSH: Enable Secure Shell (SSH) to make secure, encrypted connections in the network. Secure Shell is a network protocol that allows data to be exchanged using a secure channel between two network devices.

HTTPS: Enable HTTPS to transfer and display web content securely. The Hypertext Transfer Protocol over SSL (Secure Socket Layer) is a TCP/IP protocol used by web servers to

transfer and display web content securely.

Email Alert

You can use the Email Alert feature to send messages to the configured email address when particular system events occur.

Note: Do **NOT** use your personal email address as it can unnecessarily expose your personal email login credentials. Use a separate email account made for this feature instead

Subject: Enter the text to appear in the email subject line.

Username: Enter the username for the email account that will be used to send emails.

Password: Enter the password for the email account that will be used to send emails.

SMTP Server: Enter the IP address or hostname of the outgoing SMTP server.

Port: Enter the SMTP port number to use for outbound emails.

Time Zone

Time Setting

This page allows you to set the internal clock of the AP.

Date and Time Settings

Manually Set Date and Time

Date: 2016 / 06 / 16

Time: 07 : 21 (24-Hour)

Automatically Get Date and Time

NTP Server: pool.ntp.org

Time Zone

Time Zone: UTC+00:00 Gambia, Liberia, Morocco ▼

Enable Daylight Saving

Start: January ▼ 1st ▼ Sun ▼ 00:00 ▼

End: January ▼ 1st ▼ Mon ▼ 00:00 ▼

Apply saved settings to take effect

Manually Set Date and Time: Manually specify the date and time.

Synchronize with PC: Click this button to synchronize Date and time of this AP with the PC.

Automatically Get Date and Time: Select Automatically Get Date and Time and check whether you wish to enter the IP address of an NTP server or use the default NTP server to have the internal clock set automatically.

Time Zone: Choose a time zone to implement the service for this AP.

Enable Daylight Saving: Check whether daylight savings applies to your area.

Start: Select the day, month, and time when daylight savings time starts.

Enable Daylight Saving: Select the day, month, and time when daylight savings times ends.

Auto Reboot Settings

You can specify how often you wish to reboot the AP.

Auto Reboot Setting

Status	<input type="radio"/> Enable <input checked="" type="radio"/> Disable
Timer	<input type="checkbox"/> Sunday <input type="checkbox"/> Monday <input type="checkbox"/> Tuesday <input type="checkbox"/> Wednesday <input type="checkbox"/> Thursday <input type="checkbox"/> Friday <input type="checkbox"/> Saturday

	Saturday	available ▾	00 : 00 ~ 24 : 00

Status: Enables or disables the Wi-Fi scheduler function.

Wireless Radio: Select 2.4 GHz or 5 GHz from the drop-down list for the preferred band type.

SSID Selection: Select a SSID from the drop-down list.

Schedule Templates: Select a schedule template from the drop-down list.

Day(s): Place a checkmark in the boxes for the desired days or select the **All Week** radio button to select all seven days of the week.

Duration: The Start Time is entered in two fields. The first box is for hours and the second box is for minutes. The End Time is entered in the same format as the Start time.

Tools

Ping Test Parameters

This page allows you to analyze the connection quality of the AP and trace the routing table to a target in the network.

Ping Test Parameters	
Target IP / Domain Name	<input type="text"/>
Ping Packet Size	<input type="text" value="64"/> Bytes
Number of Pings	<input type="text" value="4"/>
<input type="button" value="Start"/>	<div style="border: 1px solid gray; height: 100px; width: 100%;"></div>

Traceroute Test Parameters	
Target IP / Domain Name	<input type="text"/>
<input type="button" value="Start"/> <input type="button" value="Stop"/>	<div style="border: 1px solid gray; height: 100px; width: 100%;"></div>

Target IP: Enter the IP address you would like to search.

Ping Packet Size: Enter the packet size of each ping.

Number of Pings: Enter the number of times you wish to ping.

Start Ping: Click Start Ping to begin pinging the target device (via IP).

Traceroute Target: Enter the IP address or domain name you wish to trace.

Start Traceroute: Click Start Traceroute to begin the trace route operation.

Speed Test Parameters / LED Control

This page allows you to implement speed test to realize the throughput of a target DUT.

Speed Test Parameters

Target IP / Domain Name	<input type="text"/>
Time Period	<input type="text" value="20"/> Sec
Check Interval	<input type="text" value="5"/> Sec
IPv4Port	<input type="text" value="5001"/>
IPv6Port	<input type="text" value="5002"/>
<input type="button" value="Start"/>	

Target IP / Domain Name: Enter an IP address or domain name you wish to implement a speed test for realizing the variance on wireless speed.

Time Period: Enter the time in seconds that you would like the test to implement for and in how many intervals.

IPv4/IPv6 Port: This Access Points uses IPv4 5001 and IPv6 5002 port for the speed test.

Start: Click start to implement speed test.

LED Control

Control LED on/off for Power, LAN interface, or 2.4 GHz/5 GHz WLAN interface.

Power: Enables or disables the Power LED indicator.

LAN: Enables or disables the LAN LED indicator.

WLAN-2.4 GHz: Enables or disables the WLAN-2.4 GHz LED indicator.

WLAN-5 GHz: Enables or disables the WLAN-5 GHz LED indicator.

Device Discovery

This page allows you to discover devices from network for Operation Mode, IP Address, System MAC Address and Firmware version.

Device Discovery

Device Name	Operation Mode	IP Address	System MAC Address	Firmware Version
-------------	----------------	------------	--------------------	------------------

Scan

Account

This page allows you to change the AP username and password. By default, the username is: **admin** and the password is: **admin**. The password can contain from 0 to 12 alphanumeric characters and is case sensitive.

Account Settings

Account Settings

Administrator Username	<input type="text"/>
Current Password	<input type="password"/> 
New Password	<input type="password"/> 
Verify Password	<input type="password"/> 

Administrator Username: Enter a new username for logging in to the New Name entry box.

Current Password: Enter the old password for logging in to the Old Password entry box.

New Password: Enter the new password for logging in to the New Password entry box.

Verify Password: Re-enter the new password in the Confirm Password entry box for confirmation.

Apply: Click **Apply** to apply the changes.

Firmware

Firmware Upgrade

This page allows you to upgrade the firmware of the AP.

Firmware Upgrade

Current Firmware Version: 1.0.0

Select the new firmware from your hard disk.

<input type="text"/>	<input type="button" value="瀏覽"/>	<input type="button" value="Upload"/>
----------------------	-----------------------------------	---------------------------------------

To Perform the Firmware Upgrade:

1. Click the **Choose File** button and navigate the OS file system to the location of the upgrade file.
2. Select the upgrade file. The name of the file will appear in the Upgrade File field.
3. Click the **Upload** button to commence the firmware upgrade.

Note: The device is unavailable during the Firmware upgrade process and must restart when the upgrade is completed. Any connections to or through the device will be lost.

Backup/Restore

This page allows you to save the current device configurations. When you save your configurations, you also can reload the saved configurations into the device through the Restore Saved Settings from a file section. If extreme problems occur, or if you have set the AP incorrectly, you can use the **Reset** button in the Revert to Factory Default Settings section to restore all the configurations of the AP to the original default settings.

Backup Setting: Click **Export** to save the current configured settings.

Restore New Setting: To restore settings that have been previously backed up, click **Browse**, select the file, and click **Restore**.

Restore to Default: Click **Reset** button to restore the AP to its factory default settings.

Backup/Restore Settings

- **Caution:** Please write down your account number and password before saving. The user settings will now become the new default settings at the next successful login.

User Setting

The function allows you to backup the current device configurations into the AP as the default value. If extreme problems occur, or if you have set the AP incorrectly, you can push the Reset button to revert all the configurations of the AP to the user default.

Back Up Setting as Default: Click **Backup** to backup the user settings you would like to the device's memory for the default settings.

Restore to User Default: Click **Restore** to restore user settings to the factory standard settings.

Note1: After setting the current settings as the default, you should click the **Restore to Default** on the web interface for reverting the settings into the factory default instead of pushing the reset button.

Note2: Please **write down** your account and password before saving. The user settings will now become the new default settings at the next successful login.

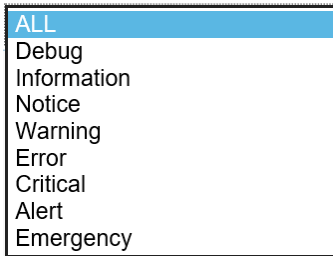

Log

System Log

The AP automatically logs (records) events of possible interest in its internal memory. To view the logged information, click the **Log** link under the System Manager menu. If there is not enough internal memory to log all events, older events are deleted from the log. When powered down or rebooted, the log will be cleared.

Status: Enable/Disable this function.

Log type: You may choose one of log types to display logs in the following window. The default log types is All.

Remote Log

This page allows you to setup the Remote Log functions for this AP.

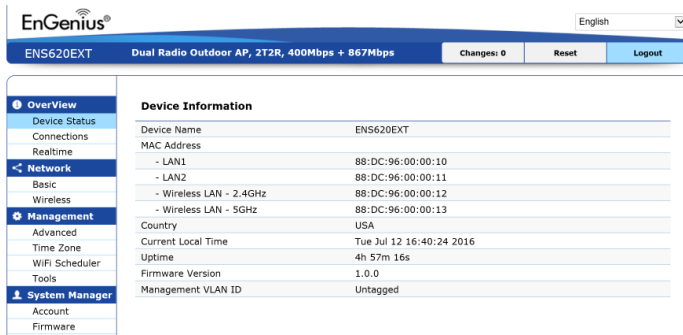

Remote Log: Enable/Disable this function.

Log Server IP Address: Enter the IP address of the log server.

Apply: Click **Apply** to apply the changes.

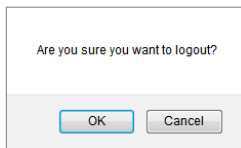

Logout

Logout: Click Logout in Management menu to logout.

The screenshot shows the EnGenius web interface for device ENS620EXT. The top navigation bar includes 'Changes: 0', 'Reset', and 'Logout' buttons. On the left sidebar, the 'Management' menu is expanded, showing options like 'Advanced', 'Time Zone', 'WIFI Scheduler', 'Tools', 'Account', and 'Firmware'. The 'Logout' button is highlighted in blue.

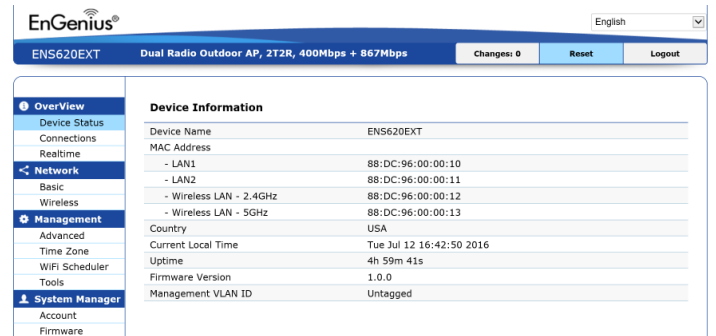

Please confirm again to logout the system or not.

A small dialog box with a white background and a grey border. It contains the text 'Are you sure you want to logout?' and two buttons: 'OK' and 'Cancel'.

Reset

In some circumstances, it may be required to force the device to reboot. Click on **Reset** to reboot the AP.

The screenshot shows the 'Device Information' page in the EnGenius web interface. The left sidebar has 'System Manager' expanded, showing 'Account' and 'Firmware' options. The main content area displays a table of device information for ENS620EXT.

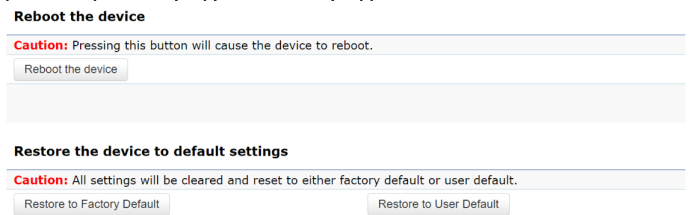

Device Information	
Device Name	ENS620EXT
MAC Address	
- LAN1	88:DC:96:00:00:10
- LAN2	88:DC:96:00:00:11
- Wireless LAN - 2.4GHz	88:DC:96:00:00:12
- Wireless LAN - 5GHz	88:DC:96:00:00:13
Country	USA
Current Local Time	Tue Jul 12 16:40:24 2016
Uptime	4h 57m 16s
Firmware Version	1.0.0
Management VLAN ID	Untagged

Once you click reset button, you will see the options for reboot or restore this AP.

Reboot the device: Click it to reboot this device.

Restore to Factory Default: Click it to reset this device to factory default setting.

Restore to User Default: Click it to reset this device to user default settings. For realizing the setting method, you may refer page 65 and page 66.

The screenshot shows the 'Reboot the device' and 'Restore the device to default settings' sections. The 'Reboot the device' section has a 'Reboot the device' button. The 'Restore the device to default settings' section has two buttons: 'Restore to Factory Default' and 'Restore to User Default'. Both sections include a 'Caution' message.

Reboot the device

Caution: Pressing this button will cause the device to reboot.

Reboot the device

Restore the device to default settings

Caution: All settings will be cleared and reset to either factory default or user default.

Appendix

Appendix A

Federal Communication Commission Interference Statement

This equipment has been tested and found to comply with the limits for a Class B digital device, pursuant to Part 15 of the FCC Rules. These limits are designed to provide reasonable protection against harmful interference in a residential installation. This equipment generates, uses and can radiate radio frequency energy and, if not installed and used in accordance with the instructions, may cause harmful interference to radio communications. However, there is no guarantee that interference will not occur in a particular installation. If this equipment does cause harmful interference to radio or television reception, which can be determined by turning the equipment off and on, the user is encouraged to try to correct the interference by one of the following measures:

- Reorient or relocate the receiving antenna.
- Increase the separation between the equipment and receiver.
- Connect the equipment to an outlet on a circuit different from that to which the receiver is connected.
- Consult the dealer or an experienced radio/TV technician for help.

FCC Caution:

Any changes or modifications not expressly approved by the party responsible for compliance could void the user's authority to operate this equipment.

This device complies with Part 15 of the FCC Rules. Operation is subject to the following two conditions: (1) This device may not cause harmful interference, and (2) this device must accept any interference received, including interference that may cause undesired operation.

IMPORTANT NOTE:

Radiation Exposure Statement

This equipment complies with FCC radiation exposure limits set forth for an uncontrolled environment. This equipment should be installed and operated with minimum distance 20 cm between the radiator & your body.
